

KYDC

The best way to manage your customer's digital identity

What is KYDC?

KYDC (Know Your Digital Customer) is a platform that allows to create the onboarding process that best adapts to the needs of your company, with full compliance guarantees.

Improve the user experience of your onboarding process by getting information directly from the identity documents, and let face biometrics confirm the real identity of your next client.

Identify your clients digitally, anytime and anywhere,

without downloading applications, directly from the web browser of your device.

100% Safe
Maximum compliance guarantees for company and customer

100% Integrable
API integrable solutions with real-time information through call-backs

UX Desing
All functionalities, in minimum steps for better user experience

What can we do?

KYDC applies business rules and personalized flows from customer onboarding, and uses business automation to certify the identity, according to regulations and compliance.

Create a multi-device and universal onboarding process, adapted to customer capabilities, and 100% integrable with your business process.

Identify your clients remotely with full guarantees. ✓

Capture information directly from official documents. ✓

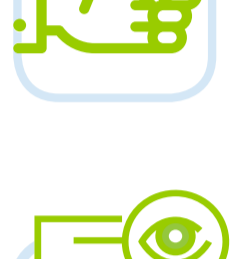

Electronically sign the contract with your clients. ✓

Identify your product through barcode or QR code. ✓

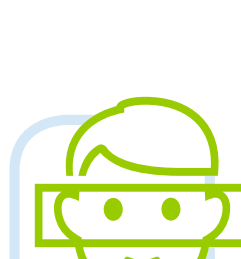

Determine face biometrics and compare it with the photograph of the identity document. ✓

Acting as a trusted third party, we can maintain a continuous track through all the steps, so we can assure that there are no leaks in the whole identification process.

How does it work?

The client shows the ID on his own device (PC, Tablet, Mobile) without app or software required

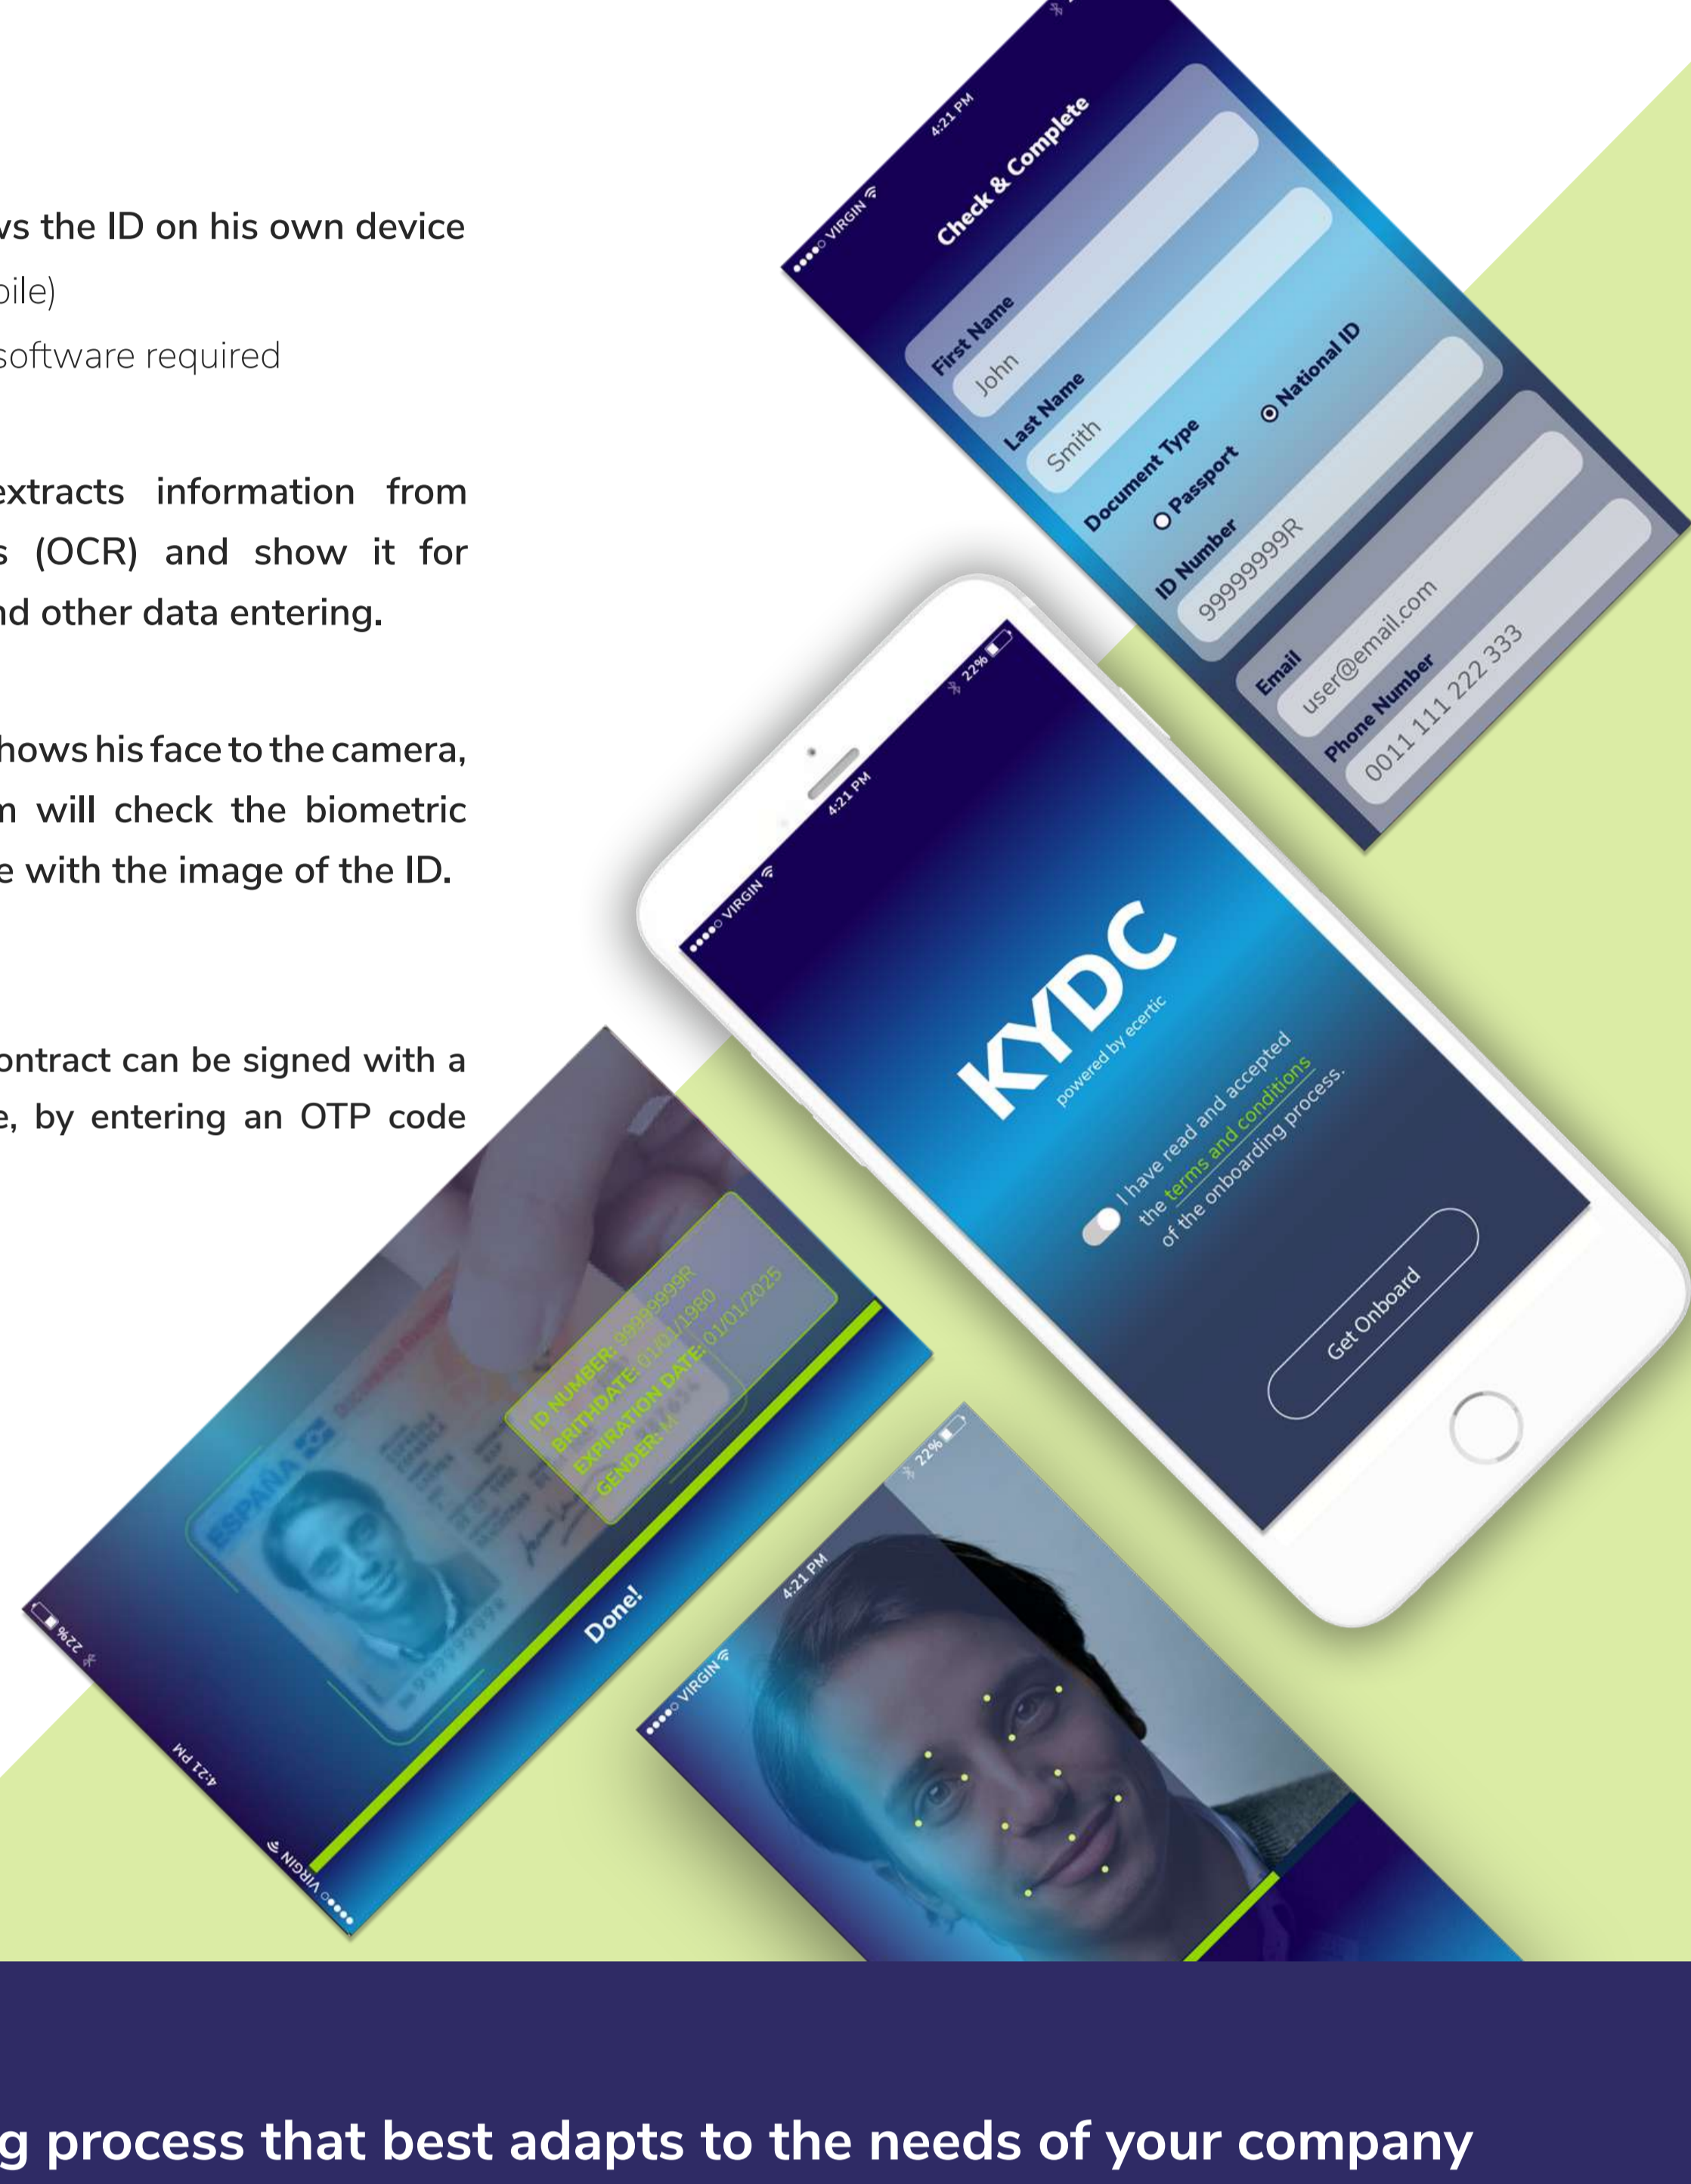

The system extracts information from the documents (OCR) and show it for confirmation and other data entering.

The customer shows his face to the camera, and the system will check the biometric correspondence with the image of the ID.

If needed, the contract can be signed with a digital signature, by entering an OTP code sent by SMS.

Create the onboarding process that best adapts to the needs of your company

Components

KYDC offers the possibility of integrating different components, which convert this tool in the most agile and secure way to manage the digital identity of your clients.

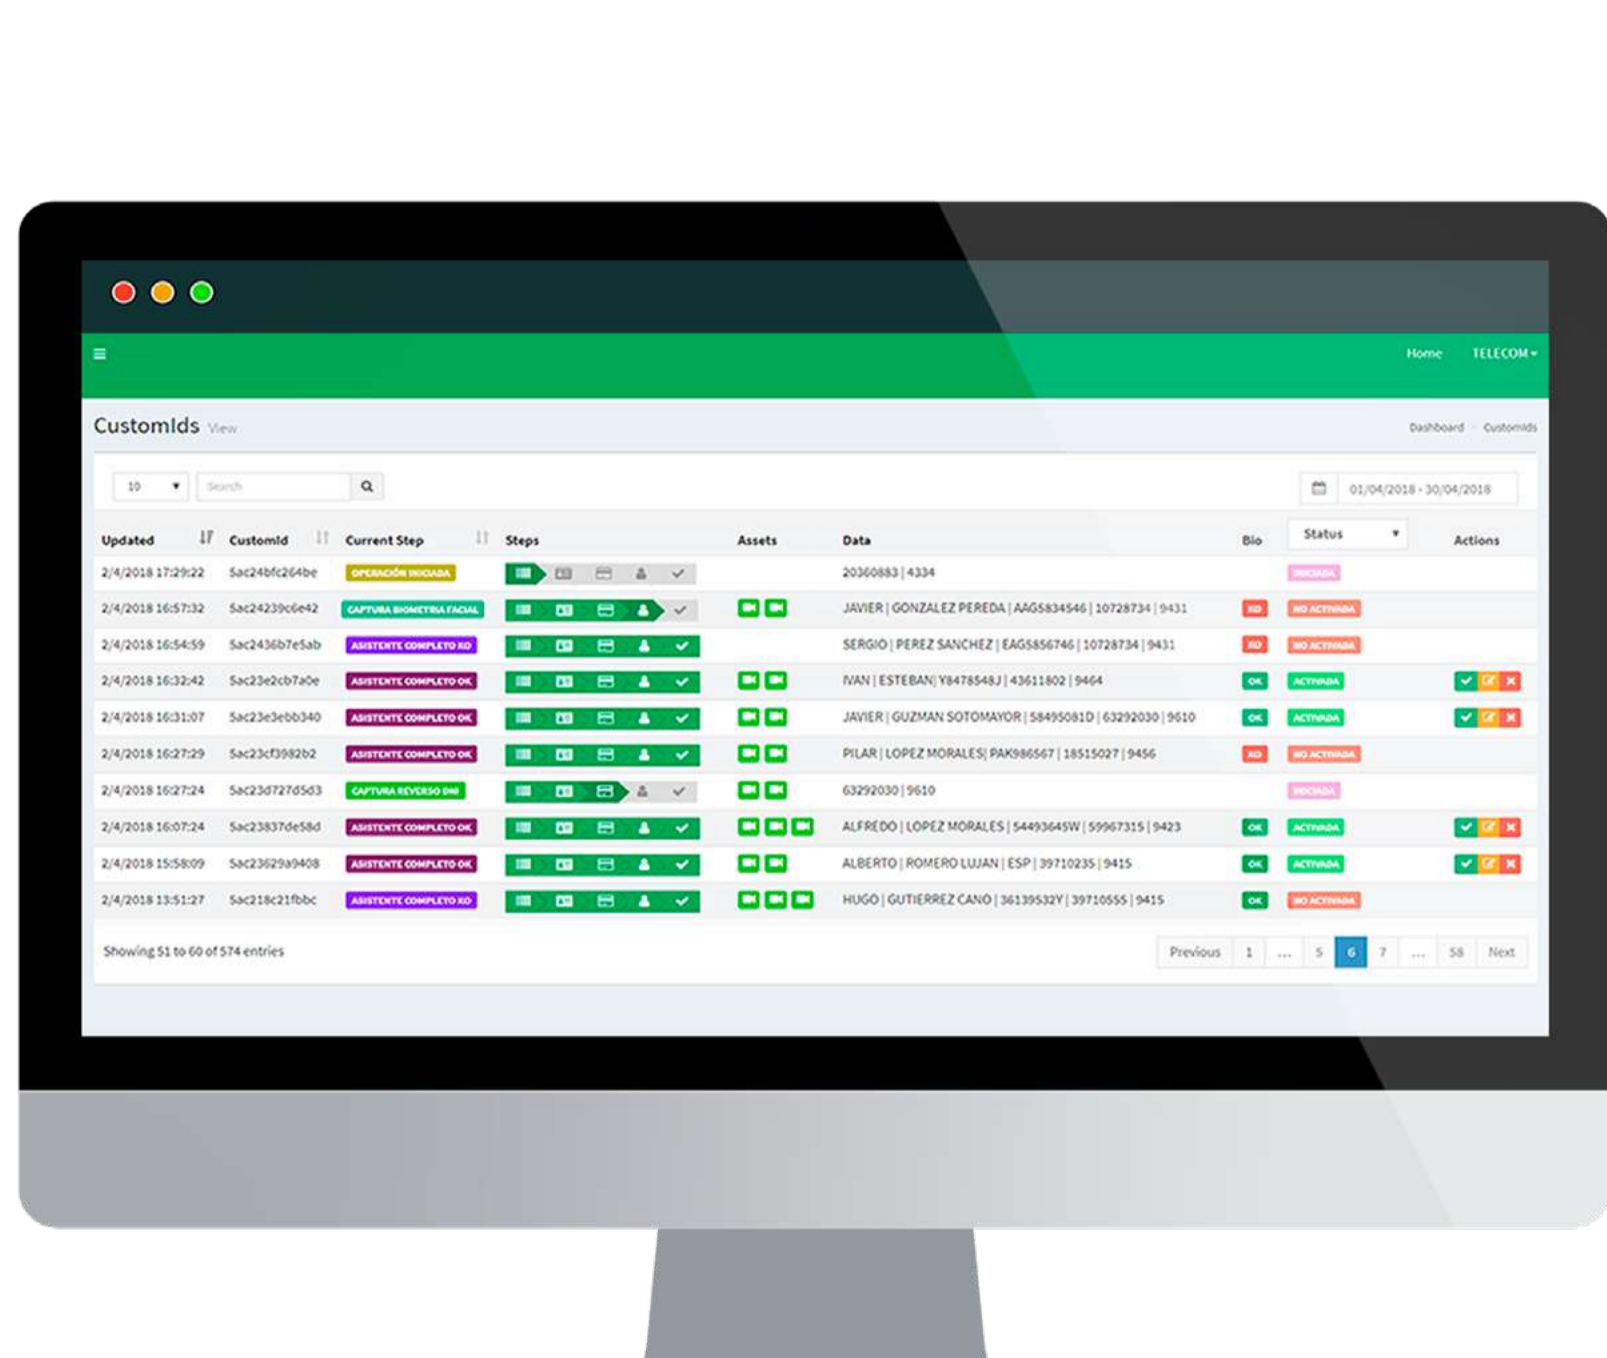

Key Features

- Transparent to the user, 100% compatible
- Omnichannel and Omnidevice
- Personalized identification flows
- Dynamic capture of other document types
- Document integrity verification
- Validation algorithms
- Blockchain integrated
- High Availability Service. Error tolerance capability
- Third parties integration
- No installation or configuration required to end user
- Minimum bandwidth consumption
- UX / UI Customizable

Backoffice

Fully integrable with your CRM system, the back-office offers real-time trace of all the operations regarding the initial onboarding process or verification upgrades. It also covers the need of evidence and conservancy of the data, required by the current regulation.

The company can set their own business rules for client validity, and the system will show all the features needed for easy acceptance management:

- ✓ Stages of the client's verification status
- ✓ Images and videos of the documents and clients face
- ✓ Possible actions with this client
- ✓ Data extracted from the documents or entered by the client
- ✓ Result from face matching biometrics

Get an e-signed PDF with the evidences of the process

Certification of the onboarding process

KYDC generates an electronically signed PDF with evidence of the identification process. This PDF certifies the process and collects:

About Ecertic

Ecertic is pioneer in technological developments in the areas of electronic signature and digital identity. In less than three years of the field, thanks to our innovative vision of digital identity and the optimization of onboarding processes with full compliance solutions.

We apply technologies such as artificial intelligence, face biometrics, machine learning and Blockchain, to digital transformation and Know Your Customer, creating flexible systems of electronic contracting, providing the maximum legal guarantees.
